CFR Series

Principle Markets: Prime labels, direct mail, lottery ticket, wine and spirit labels.

Description: The CFR Series was specifically formulated for the thru-cure wet lamination process. One of its key advantages is its ability to be flexo, screen and offset overprinted by both UV and conventional inks and lacquers. The CFR Series allows the printer to maintain existing press speeds. ITW cold foil delivers greater flexibility as many special colors and a wide range of special effects means an even broader portfolio of finishing options. ITW Foils cold foil is manufactured in the United States.

Standard Shades:

- Bright & Satin Silver
- Bright & Satin Gold

Application:

- The CFR Series is formulated for fine line detail to broad coverage on typical web flexo presses such as Gallus, Mark Andy, Nilpeter and Comco.
- The CFR Series is designed for excellent compatibility with a variety of adhesives.
- CFR provides an easy release that eliminates potential dusting.

Substrates

- Plastic base such as PE, PP and PET
- Coated and uncoated paper stocks

Features:

- Faster set-up time
- Increase line speed over hot stamp
- Eliminates tooling
- High transparency to UV light
- High quality brightness

Benefits:

- Improved productivity
- Match print speed
- Savings on job costs
- Thru-cure
- Greater visual attractiveness

Making Brands Shine

May 2016

ITW Foils line of cold foils are manufactured using advanced technology and manufacturing techniques. ITW Foils has engineered these foils from superior materials for easy efficient and economical use in a wide variety of applications. ITW Foils make no express or implied warranties, and the buyer assumes all risk and liability for results obtained by use of this material, whether singly or in combination with any other products.
